URSPACE

Transforming Abandoned Spaces into Sustainable Futures.

A global platform for sharing creative environmental design ideas.

Purpose

URSPACE is a global platform that collects and shares creative design ideas for abandoned and underused spaces.

We aim to make environmental design more accessible and actionable for everyone.

Our goal is to turn unused spaces into sustainable, community-centered environments.

Why We Started

Cities are full of abandoned or underused spaces that harm communities instead of helping them.

At the same time, many great design ideas remain unused and unseen.

URSPACE was created to connect these ideas with real-world spaces and opportunities.

What We Need

We are looking for architecture and design students to share their creative projects, concepts, and studio work.

Your designs can become part of a global database of real, impactful ideas.

We especially welcome designs related to sustainability, urban redesign, and public spaces.

Your Impact

Your work will not just stay in a portfolio—it can inspire real change in cities around the world.

You help transform unused spaces into meaningful environments for communities.

Together, we make environmental design more open, collaborative, and impactful.

Before / After Example

An abandoned, empty urban lot with no purpose, often attracting waste and neglect.

A green public space with seating, plants, and community activity areas designed for sustainability and social use.

Program overview

URSPACE provides a hands-on process where students turn ideas into real urban solutions.

1. Identify
Find abandoned or underused urban spaces and analyze community needs.

2. Design
Create sustainable designs using eco-friendly and energy-efficient ideas.

3. Implement
Develop proposals and connect with local communities to bring ideas to life.

4. Collaborate
Work with students, professionals, and organizations worldwide.

Vision & Contact

OUR VISION
"Transform unused spaces into meaningful places."

URSPACE aims to turn abandoned urban areas into sustainable, creative, and impactful environments.
